

Environmental Disclosure for the Electricity Products of Verde Energy USA, Inc.

Electricity Supplied from June 1, 2016 to May 31, 2017

Electricity can be generated in a number of ways with different impacts on the environment. The standardized environmental information shown below allows you to compare this electricity product with electricity products offered by other electric suppliers. The data shown below are default values and do not necessarily reflect the energy that Verde Energy USA, Inc. will supply.

Energy Source

Verde Energy USA, Inc. relied on these energy resources to provide the electricity product.

Coal	34.70%
Gas	26.07%
Hydroelectric (large)	1.01%
Nuclear	34.38%
Oil	0.19%
Renewable Energy Sources	
Captured methane gas	0.31%
Fuel cells	0.00%
Geothermal	0.00%
Hydroelectric (small)	0.00%
Solar	0.15%
Solid waste	0.49%
Wind	2.43%
Wood or other biomass	0.27%
Total:	100.00%
Renewable Energy Sources Subtotal	3.65%

Air Emissions

The emission data given are default values and represent the average amount of air pollution associated with the generation of electricity in the region. This amount is compared to the New Jersey benchmark. The benchmark approximates the average emission rate for all electricity generation in New Jersey.

CO₂ is a "greenhouse gas" which may contribute to global climate change. NO_x and SO₂ react to form acids found in acid rain. NO_x also reacts to form ground level ozone, an unhealthful component of "smog."

Source	CO ₂	NO _x	SO ₂
Total	88.6%	378.3%	1198.2%

Energy Conservation

Verde Energy USA, Inc. is not investing in energy conservation measures for this electricity product. Energy conservation measures means less electricity needs to be generated and pollution is avoided.

Avoided Generation	Avoided Air Emissions
0 kWh	0 tons CO ₂
	0 tons NO _x
	0 tons SO ₂
